

Perforations

NON PERFORATED SCREEN

On the right, you have the comparison between a perceived sound without any obstacle and the same sound perceived through a cinema screen with no perforations. As you can see, the effect is noticeable from the mid frequencies.

Use non perforated screens only when there are no speakers installed behind the screen.

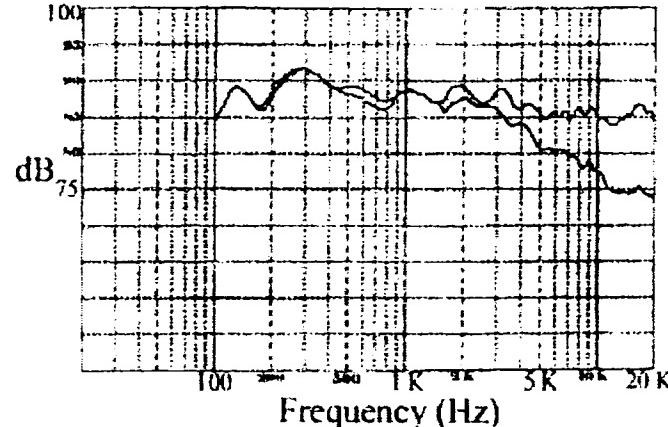

2% PERFORATED SCREEN (Mini Perf)

This perforation is mainly used in small theaters where the audience is near the screen.

holes diameter: 0.040
m / 1.9mm

see the pattern

6% PERFORATED SCREEN (Cine Perf)

This is our standard perforation. This is the perforation used in cinema: the audience is far enough not to notice the perforation and you can see the remarkable performance in the high frequencies so easier to manage sound through a 6% perforated screen.

holes dimensions:
0.054m / 1.37mm dia.
